

Catch the Falling Objects

10-week work plan

Week 1: Basic Game Window

- Create JFrame and game screen (JPanel)
- Set window size and background
- Run basic empty game screen

Week 2: Player Setup

- Create catcher (player box/image)
- Add left/right movement using keyboard
- Keep player inside screen

Week 3: First Falling Object

- Create single falling object
- Make it fall from top to bottom
- Reset when it reaches bottom

Week 4: Multiple Objects

- Add multiple falling objects
- Random starting position
- Smooth continuous falling

Week 5: Catch System

- Detect when player catches object
- Remove object after catch
- Show simple effect (like +1 score)

Week 6: Score System

- Add score counter
- Display score on screen
- Increase score on every catch

Week 7: Miss System (Lives)

- Add 3 lives
- Reduce life when object missed
- Show lives on screen

Week 8: Difficulty Increase

- Increase speed slowly
- Increase number of objects over time
- Make game harder automatically

Week 9: Game Over + Restart

- Game over when lives = 0
- Show restart button
- Reset score and lives

Week 10: Final Polish

- Improve UI (colors, font, layout)
- Fix bugs
- Add simple sound (optional)
- Final testing & submission
